1 INTRODUCTION

1.1 PROJECT DESCRIPTION

The goal of this project is to create a graphical user interface (GUI) web application that could predict whether a news article is fake or not using trained models that have been trained over open-source datasets with the utilisation of Natural Language Processing (NLP) concepts based on the article text content.

1.2 PURPOSE OF THE DOCUMENT

The aim of this document is to provide a comprehensive architectural framework for the fake news automatic detection using machine learning and deep learning algorithms.

1.3 SCOPE OF THE DOCUMENT

This document presents the technical architecture which helps the readers to get an overall understanding of the tools and technologies, system level and web application frameworks, model workflow etc. for the development of web application.
